

AMAZING ! THE CRITERION NEBULAE FILTER

Now you can observe Nebulae clearly-even under extremely adverse lighting conditions! Eliminates light pollution in your area!

Yes, the new Criterion Nebulae Filter is truly a telescope owner's dream come true. This remarkable filter completely blocks all forms of streetlights yet allows Nebulae light to pass through undisturbed. Even in heavily lighted areas, Nebulae will be clearly seen against a dark background. Makes dark sky locations even darker!

The Criterion Nebulae Filter utilizes only the highest quality multilayer, dielectric, interference coatings available to today's high technology, "state of the art" coating techniques. These special coatings provide peak transmission of H-Alpha, H-Beta, and Doubly Ionized Oxygen lines while fully blocking out unwanted Sodium and Mercury Vapor lights, as well as natural skyglow. The coatings are extremely durable and require no special care or protection.

The Criterion Nebula Filter is available in both visual and photo-visual models described below:

Visual Model (for 1½" eyepieces) :

This is a 1½" diameter filter designed to thread directly into the front of your Dynamax star diagonal. By so doing, you will be able to freely interchange eyepieces without disturbing the filter itself. The visual model incorporates a narrow band-pass design, providing a darker background that yields maximum contrast to nebulae. This filter is for visual use only - we do not recommend this filter for astrophotography.

Photo Visual Model

This is a 1½" diameter filter which utilizes a "T" thread that will screw directly onto the threads of the Dynamax off-axis guider, Cass-egrain Focus Adapter, or Focal Reducer. This photo-visual model utilizes a wide band-pass design which not only enhances nebulae but galaxies and star clusters as well! For astrophotography, the Criterion photo-visual filter transmits more starlight in shorter exposure times. We highly recommend the Photo-Visual Nebulae Filter for use with our new RFT Adapter.

VISUAL MODEL (1½" Dia.) Stock # 125VM\$59.95

"T"-THREAD PHOTO-VISUAL MODEL Stock # 150TP.....\$99.00
